

Jack says,

I can work out $40 \div 2$ easily because I know that 40 is the same as 4 tens.

This is what he does:

$$40 \div 2 = 20$$

Is it possible to work out $60 \div 3$ in the same way?
Prove it.

Is it possible to work out $60 \div 4$?
What is different about this calculation?

Alex has 20 sweets and shares them between 5 friends.

Tommy has 20 sweets and shares them between 10 friends.

Whose friends will receive the most sweets?

How do you know?
